Tripod for lifting yokes type FE-1,2

Tripod is specially designed for safe storage of lifting yokes when this isn't in operation.

The stand ensures a stable, safe, and gentle storage of lifting beams together with the claw-unit is relieved.

Stand is mounted with two pcs. guide tubes for claw scars, at the same time the lifting chain is relieved which means that a possible change of claws easily can be done in a safe way, in addition, the stand is equipped with a guide this is produced in polyurethane PEHD 300 in black, and thereby securing beams against unnecessary scratches, and at the same time the guide secures easy placing of yoke.

Tripod is made in seawater-resist aluminum. Weight each tripod app. 50Kg.

One set consist of two identical tripods, this also ensures that lifting yokes can be stalled where this is most appropriate.

Option: Tripod can be equipped with special designed ladder for secure access to crane hook, and cable connection, ladder and fittings are made in seawater-resist aluminum.
