SP-Tilt= Safe handling of pallet tanks

SP-Tilt with pallet tank

SP-Tilt handled with fog lift

A safe working environment ☺

SP-Tilt ensures that the pallet tank is emptied completely, regardless of whether a suction lance is used, or the tank is emptied using the bottom valve.

SP-Tilt is a newly developed manual hydraulic handling and tilting device for pallet tanks.

SP-Tilt can be handled using a truck, stacker or forklift, and the tilting function is easy with the built-in hydraulic jack. At the same time, an edge ensures that the pallet cannot slip.

SP-Tilt is in aluminum and is available in 2 sizes: BM-Tilt / EU 80x120, and BM-Tilt / XL100x120

SP-Tilt is CE-marked.
