

## Announcement

Scan-Pile has per 1/7-2022 entered into an agreement with KD Maskinfabrik Vejle A/S to take over all rights related to marketing, sales, service and production of equipment for the production of prefabricated concrete piles (foundation piles)

It was the former Kaj Dalgaard Smede & Maskinværksted (KD Maskinfabrik) that in 1988 developed the revolutionary automatic mold system for Centrum Pæle A/S Vejle.

Over time, this automatic form system has been established at all of Centrum Pæle's (now part of the Aarsleff group) pile factories in Europe. Skanska AB has chosen a similar solution at their factory in Bollebygd (Sweden)

Scan-Pile will in future market this system both at home and on the export market. The system fits into Scan-Pile's other program which (in collaboration with strategic sub-suppliers) includes the complete machine delivery from the production of reinforcing mesh over concrete mixing plants to complete production plants VERS® this is the world's most automatic production plant for prefabricated concrete piles.
