Scan-Pile **VERS®** (Value-Engineered Rotation-System) Is a completely new way of thinking fully automatic Pile production, the system is multi-flexible, with the highest daily production capacity

**VERS®**, is the world most optimized system for pre-cast foundation piles production, everything is completely automatic and fully controlled to ensure a minimum of working force and to ensure the highest quality of pre-cast piles.

**VERS®** Is designed for production of concrete-piles in dimension from 20\*20cm up to 40\*40cm and in lengths up to 15 meter, \*other dimension and lengths on request.

Scan-Pile production planning ensure optimized daily pile production, where as well operator as workers have the full overview of production, and that reinforcement, concrete, Pile-joint etc. are traceability, and ensure the quality from raw material to finally installed foundation pile.

Scan-Pile your future pile-equipment supplier, from reinforcement equipment, welding robots, reinforcement handling-systems, to concrete-mixers, casting-units, mould equipment, rotating systems, to pile-joints, rock-shoes and to production-planning and quality-systems.
